Tl	10.2	±	0.6
Zn	1.0	±	0.8

<sup>1)</sup> Unweighted mean value of the means of accepted sets of data, each set being obtained in a different laboratory and/or with a different method of measurement. The values are traceable to the SI (Système International d'Unités) via calibration using pure metals or substances of known stoichiometry.

<sup>2)</sup> Estimated expanded uncertainty  $U$  with a coverage factor of  $k=2$ , corresponding to a level of confidence of approx. 95 %, as defined in the Guide to the expression of uncertainty in measurement, ISO, 1993.

This certificate is valid until 10/2059; this validity may be extended as further evidence of stability becomes available.

## DESCRIPTION OF THE SAMPLE

The Reference Material is available in the form of discs (40 mm diameter and 40 mm height). It is intended for establishing and checking the calibration of optical emission and X-ray spectrometers (excluding micro-analysis) for the analysis of samples of similar materials.

## NOTE

European Reference Material ERM<sup>®</sup>-EB101a was produced and certified under the responsibility of BAM Federal Institute for Materials Research and Testing in cooperation with the Committee of Chemists of the GDMB, Gesellschaft für Bergbau, Metallurgie, Rohstoff- und Umwelttechnik according to the principles laid down in the technical guidelines of the European Reference Materials<sup>®</sup> co-operation agreement between BAM-LGC-IRMM. Information on these guidelines is available on the Internet (<http://www.erm-crm.org>).

Accepted as an ERM<sup>®</sup>, Berlin, 2009-09-30.

<b>Indicative Values<sup>1)</sup></b>		
	Indicative value	Uncertainty
Element	Mass fraction in mg/kg	
As	< 2	
Ni	< 0.6	
P	< 3	
Sb	< 1.2	

<sup>1)</sup> Values were not certified, but given as indicative values, when the number of accepted data sets was considered to be too low (< 5), when the uncertainty from the inter-laboratory certification was considerably larger than the expected range or when only an upper limit can be given.

<b>Additional Material Information<sup>1)</sup></b>		
	Mean or upper limit	Std.-dev <sup>2)</sup>
Element	Mass fraction in mg/kg	
Cd	< 2	
Fe	< 2	
Mg	9	± 1
Na	4	± 1
S	< 3	
Te	< 3	

<sup>1)</sup> Values were obtained in an interlaboratory comparison with spark emission spectrometry.

<sup>2)</sup> Standard deviation calculated from the mean of means of the interlaboratory comparison with n = 6 for Cd and Fe, n = 4 for Mg, n = 7 for Na, n = 12 for S and n = 11 for Te.

The laboratory mean values have been examined statistically to eliminate outlying values. Each laboratory mean consists of at least 4 but usually 6 single values. Where " --- " appears in the table it indicates that an outlying value has been omitted (Grubbs 99 %). " < "-values have not been considered in statistical evaluation.

$M$  : mean of means of data sets

$s_i$  : mean of standard deviations of data sets under repeatability conditions

$s_M$  : standard deviation of means of data sets

## TECHNICAL REPORT

## INTENDED USE

The CRM is intended for establishing and checking the calibration of optical emission and X-ray spectrometers (excluding micro-analysis) for the analysis of samples of similar materials. The minimum sample size for wet chemical analysis is 0.5 g.

## INSTRUCTIONS FOR USE

Before use, the surface of the material must be prepared by milling or turning on a lathe.

## STORAGE

The material should be stored in a dry and clean environment at room temperature.
