

Reference procedure

Instrumented Indentation Testing (IIT) for determination of hardness and further mechanical properties

Proof of competence

ISO/IEC 17025 accreditation

Testing quantities and objects

Indentation hardness H_{IT} and indentation modulus E_{IT}

Sufficiently plane sample surfaces

Testing range

All materials from rubber to diamond-like materials:

Minimum/maximum test force: $F_{min}=100 \mu\text{N} / F_{max}=500 \text{ mN}$

Minimum/maximum indentation depth: $h_{min}=5 \text{ nm} / h_{max}=20 \mu\text{m}$

Expanded measurement uncertainty ($k = 2$)

Uncertainties: force $< 0,15\% F_{max}$ and indentation depth $< 1,5\% h_{max}$

Measurement uncertainties of H_{IT} and E_{IT} dependent on material and sample, e.g.
polished RM fused silica: $U_{HIT} = 0,3 \text{ GPa} (3\%)$ and $U_{EIT} = 1,42 \text{ GPa} (2\%)$

Field of application

Determination of mechanical properties of solid-state surfaces, coatings and thin films
